for Healthcare Construction

Construction is a never-ending aspect of modernizing healthcare facilities and staying competitive, and project owners turn to contractors with proven safety, quality and project delivery track records to get the job done. **The Spot-r solution provides comprehensive visibility into workers, resources and safety across active hospital and care facility sites.** With real-time visibility into zone-based worker and equipment location on site and any safety incidents that have been reported, supervisors can proactively manage projects to minimize disruption, improve asset allocation and rapidly respond to any situation that arises.

Instantly know what's happening on your next healthcare project with Spot-r.

Bring an Added Layer of Visibility, Communication and Security to Your Next Healthcare Project

Remote visibility into site operations, resource location, and safety to stay on top of workflows and ahead of potential issues.

Safety event notifications improve response times by 91% and give project leaders the information they need to quickly respond.

Account for worker and asset location by floor and zone on a minute-by-minute basis.

Custom reports can be easily shared across project stakeholders, improving communication between contractors, facility managers and hospital staff.

Spot-r Clip: Automatically picks up the Spot-r network on site, automating time & attendance and providing real-time worker location.

Our push-button makes it easy for workers to report a hazard or signal distress from anywhere within the Spot-r network.

Spot-r EquipTag: Tracks equipment location and utilization indoors, outdoors, or anywhere within the Spot-r network.

Works with Spot-r Clips to send unknown or unauthorized equipment operator notifications.

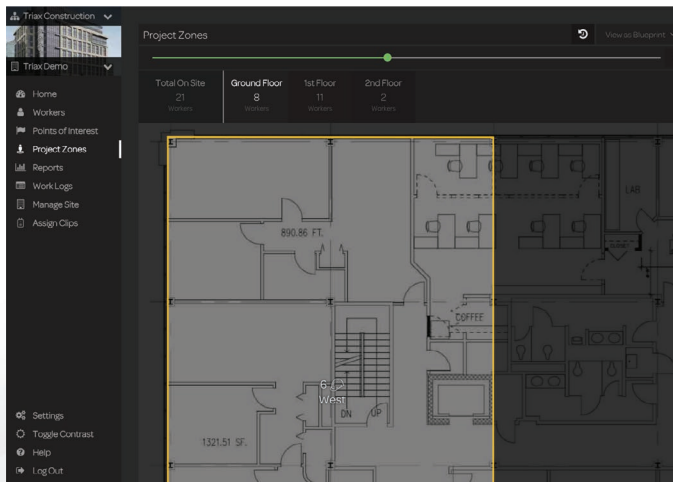

Spot-r EvacTag: Prepare for any situation that may arise with our emergency evacuation system.

When EvacTags are activated by authorized supervisors, the Spot-r system enables you to monitor real-time worker headcounts and location.

Spot-r Clips and EquipTags get extended battery life per charge. EvacTags have a 2-year-battery life with typical use.

Project Zones Historical Slider provides a minute-by-minute snapshot of worker and equipment movement across your active hospital and care facility sites.

"Creating and maintaining the right environment on site is essential to any construction company's success. For Turner, that begins with a collective commitment to return each worker home safely at the end of the day. The Spot-r system is helping us stay ahead of the safety curve, enabling us to identify where folks are in times of crisis, while also helping us improve productivity and efficiency."

-Kevin King, VP Risk Management

Turner

In addition, the intuitive, customizable Spot-r dashboard lets users:

- ☒ Easily manage worker certifications to ensure compliance
- ☒ Set custom notifications for expiring worker certifications, new to site personnel and a variety of other metrics
- ☒ Customize the homepage to easily deliver the information that matters to your project teams

"When it comes to site evacuation, every second counts. We are excited about Spot-r EvacTag because it significantly reduces the amount of time it takes to evacuate workers. Also, because it lets us track worker headcounts and locations in real-time, we can be sure everyone is accounted for. The safety benefits it offers are critical."

Plus, now we know if John Smith is off the project, because we know from the clip where he is or if he is still somewhere in the project area. In an emergency situation, we would know where to send emergency responders based on where the clip says he is."

-Don Naber, SVP - Director of Risk Management
