

Spot-r POI Tags

**Make your site more efficient and secure -
Identify when workers enter designated areas**

Whether you are completing a renovation of an occupied building such as healthcare, educational or residential facilities, or you want to monitor specific locations for efficiency bottlenecks, Spot-r has a solution for that. Using Spot-r Point of Interest (POI) Tags, you can add an additional layer of safety, security and advanced analytics to your jobsite.

Recommended Uses

- ✓ Restricted area monitoring
- ✓ Active, occupied sites (hospitals, schools)
- ✓ Lone worker check-in stations
- ✓ High volume traffic areas
- ✓ Productive vs. unproductive areas
- ✓ Confined spaces
- ✓ Shared workstations

Client Use Cases:

Restricted Access Monitoring at Hospital

- Active healthcare center in dynamic, urban environment with hundreds of workers
- Close proximity to existing patient tower
- Supervisors receive real-time notifications when workers enter the off-limits area

Window Cradle Station Fleet

- Site has 24 window washing stations for caulking
- Subcontractors claiming there were no open stations
- Introduced POI to identify open stations in real-time, improving caulking rates by 35%

Hoist Wait Times

- POI statically mounted where workers are waiting for hoists
- Measure amount of time workers are idly spending in line to optimize the number of hoists you have
- Identify critical path labor or material bottlenecks at hoists to stay on schedule

Unauthorized Access at K-12 School

- Active private school renovation
- 7 areas of access between the site and school affixed with POI
- Superintendent receives real-time notifications when worker enters one of the above access areas

Spot-r POI Tag at-a-glance:

- More granular location data than typical Spot-r zones
- Easy mounting to most surfaces
- Extended, rechargeable battery
- Durable and rugged
