

Achieve real-time worksite visibility with our flagship labor-management platform.

The powerful Spot-r Mesh for complex worksites

Delivers comprehensive insights and zone-based real-time location services (RTLS) to help improve worker safety, boost productivity, automate reporting and timekeeping, and optimize operations.

Worker safety

Monitor worker activity in designated **no-go zones** and enable workers to notify supervisors to injuries and hazards, **reducing response times** by 91%.

Automated daily reporting

View **real-time manpower**, automate check-ins and **time and attendance**, and analyze **team productivity levels**.

Efficiency optimization

View real-time worksite data from any device at any time. **Equipment usage** can be tracked in detail, and worker **safety and productivity** data can be filtered by group, subcontractor, trade, or location.

Worker Privacy

We respect the privacy of all personnel. Spot-r Mesh is designed for **worksite visibility only**. It was built to identify **inefficiencies in aggregate**, not to single workers out.

Built for the toughest industries

- ✓ Construction
- ✓ Manufacturing
- ✓ Energy
- ✓ Oil & Gas
- ✓ Industrial
- ✓ Mining

Digital transformation that works for you.

Spot-r Mesh eliminates the pain points of collecting real-time data in the field. No manual data input or siloed information: It simply collects and transmits data to your existing billing, project management, and other critical systems, making it easier than ever to optimize processes that impact your entire business.

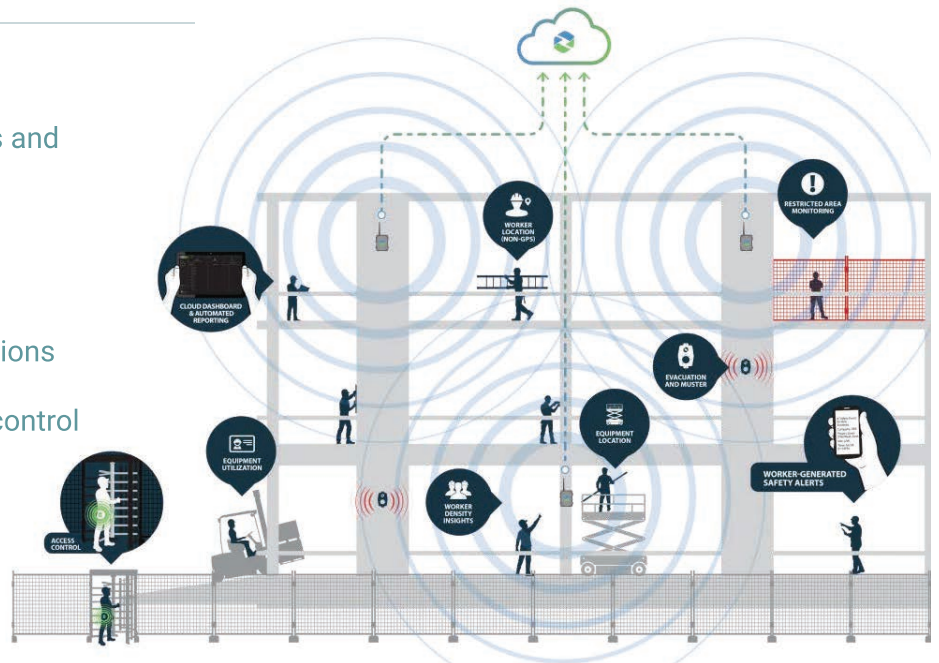

Supported Use Cases

 Real-time Safety & Security	 Labor & Workforce Efficiency	 Static & Mobile Asset Monitoring
<ul style="list-style-type: none"> • Access control and rules-based credentialing 	<ul style="list-style-type: none"> • Real-time worksite location visibility for workers, equipment, and assets 	<ul style="list-style-type: none"> • Operator tool time data and certification validation
<ul style="list-style-type: none"> • Remote safety check-ins • Smart evacuation and muster 	<ul style="list-style-type: none"> • Automated time/attendance and labor billing verification 	<ul style="list-style-type: none"> • Hazardous/restricted area alerting and monitoring
<ul style="list-style-type: none"> • Real-time, worker-generated safety notifications 	<ul style="list-style-type: none"> • Subcontractor and crew productivity scoring 	<ul style="list-style-type: none"> • Worksite bottleneck identification
<ul style="list-style-type: none"> • Supervision and labor ratio insights • Worker risk KPIs and behavior analytics 	<ul style="list-style-type: none"> • Worker certification and compliance management 	<ul style="list-style-type: none"> • Equipment utilization and fleet optimization

Spot-r Mesh At a Glance

- Rugged and durable worker wearables and asset tags
- Rechargeable battery - months of use between charges
- Open API supports third-party integrations
- Certification and rules-based access control
- Intrinsic safety rated
- Closed, dedicated network built to operate in the most challenging environments
- Supports tens of thousands of connected devices at a single location
- No dependency on client Wi-Fi or Internet
- No GPS or location data

1. Safety, productivity, location and attendance data uploaded in real-time from worker and asset tags
2. Certification and rules-based access control
3. Sitewide evacuation and muster system
4. Real-time and historical data available in Spot-r dashboard, via email or text into your critical systems
